

# TAK861 | Transformer structure

Implemented snapshot-padding pipeline and feature-selection extension • 30 September 2026

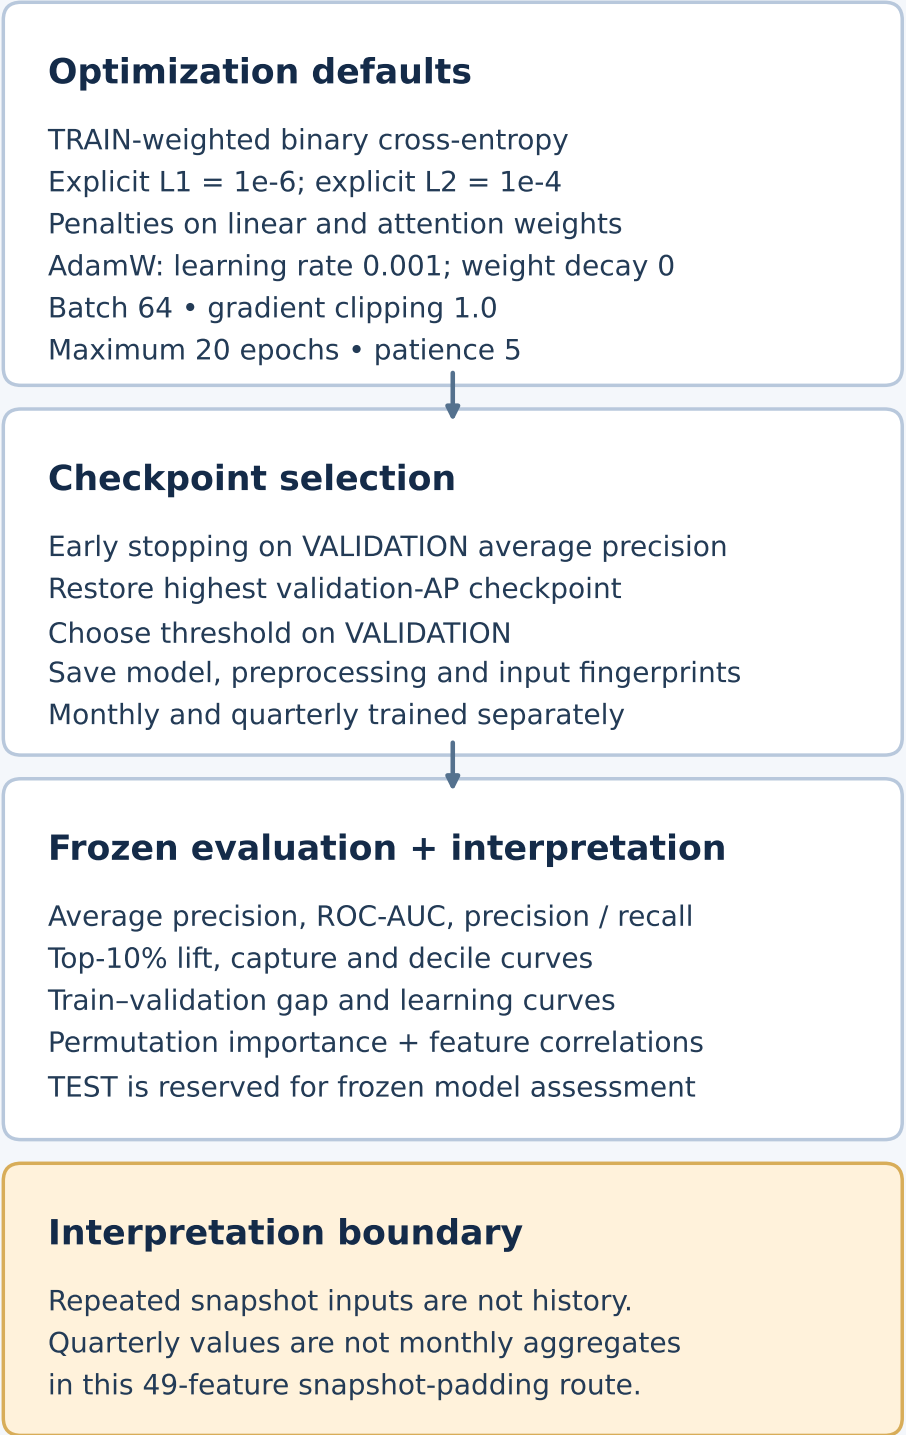

## 01 INPUTS & PREPARATION

## 02 MODEL FOR EACH REPRESENTATION

## 03 TRAINING & EVALUATION

## PARALLEL EXTENSION | Feature selection from 1,028 claims categories

Saved monthly counts → 12-month totals → latest TRAIN snapshot per patient → quality checks → three TRAIN-fold selectors  
FILTER: mutual information + redundancy pruning (100) | WRAPPER: shortlist + RFE (50) | EMBEDDED: elastic net + trees (100)  
Compared with a fixed L2-logistic evaluator: AP ≈ 0.193 / 0.195 / 0.193 versus 0.156 for all eligible features.  
These are feature-selection results, not Transformer results. Selected-feature Transformer comparison is the next experiment.
